

## **LIGHT SAFETY SCREEN**

INFRA RED SAFETY BEAM CURTAIN
MAX HEIGHT 2.5M
MASTER SLAVE SYSTEM YES
MAX RANGE 10M

Light curtains are not new to the market but they are less common; two rows of LED infrared lights fire in sequence to cover an entrance way. These systems are perfect for fast moving gates or very large heavy gates, where you do not want the gate to ever come into contact with an obstruction such as a vehicle or pedestrian.

This is the only type of photocell which can pass current health and safety regulations on its own as the whole entrance is covered, making it impossible to reach the gate without triggering the safety device.

- · Light curtains can be any height up to approximately 2.5m
- 10m max range
- The only fully certified device that can be used in isolation to make a gate safe and compliant

\*Beams shown above for illustrative purposes only.
