

ULTRA II

VEHICLE LOOP DETECTOR

The ULTRA II:

This plug-in style vehicle loop detector provides a solid-state output indicating vehicle presence. The second output can be used for presence, loop fault or pulse on entry/pulse on exit. In addition, the ULTRA II has options for automatic sensitivity boost (ASB), delay, fail-safe/fail-secure and infinite and normal (5 min.) presence. The ULTRA II is easy to install and operate. Sensitivity selection is simplified by the ULTRAMETER™ display. Ten sensitivity settings allow for finer adjustment of the detection level, and four frequency selections help to prevent crosstalk in multi-loop applications.

APPLICATIONS:

Sliding gates, swing gates, sectional doors, rolling shutters, Free exit and safety, pulse and presents.

CHARACTERISTICS:

- Adjustable sensitivity & digital display
- Frequency adjustment to avoid cross signaling with other loop systems
- Isolation transformer for use with pore quality loops
- Pulsed and presence output
- Frequency count/reset switch
- Preformed loop cable available as optional extra
