

Jolly Programmer

Engineer programming unit

The Jolly programmer unit can be used on all compatible digital control boards. The menu is displayed on the programmer unit on a larger character display for easier reading of the menus. The unit can also be used to update the control boards to the most up to date firmware.

Main Features

- Programmer for control units DG, transmitters and receivers
- Same menu display for DG control units
- Possible to download up to 10 different firmware releases
- Possible to download up to 10 different board memory settings
- Automatically takes control board revision when plugged in
