

GSM Gate Switch

Power Supply **12/24VAC/DC**

Relays **1**

The GSM Switch can receive telephone calls from any programmed phone anywhere in the world. This simple device can be added to any gate system and allows the user to open their gate by simply calling the SIM number in the unit.

Main Features

- Intuitive user interface with easy to remember commands allows the end user to set new phone numbers and remove unwanted ones. This ensures the installer doesn't have to be involved after installation.
- Can be added to any existing gate system.
- Module checks that your number is associated with the system, rejects the call so there is no charge and then opens your gate. You can program in up to 20 phone numbers to the system.
