

GHOST NON CONTACT WIRELESS SAFETY EDGE RECEIVER & TRANSMITTER

Power Supply **12/24VAC/DC & Battery**
Range **50M**

The Radio EVO GHOST is the new safety edge solution based on a capacitive wireless system. It can detect obstacles before the impact with the gate. The transmitter produces an inductive magnetic field within the safety edge to produce a non contact sensing zone. The ghost mode is activated via the use of a reed sensor and magnets positioned on the sliding gate. Up to 5 further standard Evo transmitters can be added to the system totalling 6 transmitters to the receiver unit.

Main Features

- Uses 3.6V AA batteries for easy maintenance
- 2 Year battery life
- Up to 50M range
- Boxed version fits on wall and Edge version fits inside edge
- CAT 2 safety edges system
- Self adjusting multichannel 868MHz
- Uses an inductive magnetic field
- Adjustable field strength
- Ghost mode activated via reed sensor and magnets
