

# HINGE GUARD PG-SM25

## DESCRIPTION:

Hinge Guards could not be more simple; one 250mm wide strip of EPDM flexible rubber like material is clamped by two pieces of aluminum to the surface of the gate or piers. This shields the hinge and prevents people from getting hands or fingers trapped in this closing space. The great advantage is how simply and reliably it solves a problem that in the past could only be remedied by the costly re-manufacture of the gate hinges.

## APPLICATIONS:

- External Swing Gates & Doors

## LENGTHS:

- 2m to 10m roll (can be cut to any length)

## MECHANICAL CHARACTERISTICS:

- Made from flexible EPDM
- Fixed in place with aluminium angle
- The main properties of EPDM are its outstanding heat, ozone, and weather resistance.
- Operating temperatures: -30° + 120° C.
